

Project Summary Report

Comparison between predicted, actual and baseline values

Baseline RMSE: 411600.431
Model RMSE: 56201.181

Testing

All tests will be executed at once when running the script `run-tests.py`. Tests are just accessing the test versions of models and do enter log entries just with a test and not prod source.

Api

The REST calls can be established over 0.0.0.0:8080.

The following POST options are present. All of them get a dictionary as input via post.

predict

Parameters:

country: all or name

test: true or false

Return:
prediction, probability, status (Error Message)

train

Parameters:
country: all or name
test: true or false

Return:
Status (error message)

get_log

type: predict or train
return: log file (in CSV Format) or status + error message
